		10–20 kg	2 capsules*	90 days
		>20 kg	3 capsules*	60 days

***Scoop weights** – Scoop weights are approximate, as the amount can vary depending on whether the powder is loosely or firmly packed.

***Joint Health Plus** – The table lists the maintenance serve. For dogs with acute or chronic inflammation, stiffness, or discomfort, an increased serving size (double the maintenance amount) is recommended for the first 4 weeks.

***Liquid herbals** – Duration estimates are based on once-daily servings. The same amount may be given twice daily if clinically indicated.

***Organ products** – Listed amounts are calculated based on dogs fed a BARF-style diet at ~2.5% bodyweight/day. For dogs on commercial diets, use a lower “topper” amount rather than these full BARF-based quantities.

***Pure SB** – The table lists the maintenance serving size for support during and after antibiotic use. For chronic gastrointestinal conditions (e.g., IBD), consider 1 capsule per 10–15 kg, twice daily, or as directed by your veterinarian.

***P.E.A Plus** – The table lists the maintenance serving size. For dogs experiencing acute flare-ups, an increased serving size (double the maintenance amount) can be given for the first 4 weeks, or as directed by your veterinarian.
